(848)-203-5238 | Jd1763@scarletmail.rutgers.edu | Perth Amboy, NJ | [LinkedIn](#) | [GitHub](#)

EDUCATION

Rutgers University - New Brunswick

Bachelor of Science in Computer Science | GPA: 3.5 | Dean's List

New Brunswick, NJ

Graduated: May 2025

TECHNICAL SKILLS

Languages: Java, Python, C, C++, SQL, R, JavaScript, XML, HTML, CSS, JSON

Frameworks: React, Flask (REST API), MySQL/JDBC, SQLite, Android SDK, Chrome Extensions (MV3), Tomcat

Data & Machine Learning: scikit-learn (TF-IDF, Logistic Regression), Sentence-BERT, pandas, NumPy

Tools & DevOps: Docker, AWS (Cloud Run, S3), Git/GitHub, GitHub Actions (CI/CD), Linux, Android Studio, VS Code

PROJECTS

Smart Form Filler | Python, JS, Flask, scikit-learn, SBERT, Chrome MV3, Docker, AWS

[GitHub](#) | [Demo](#): <links>

- Designed and built a Chrome MV3 extension that scans job applications, detects 60+ field types, applies confidence scoring, handles checkbox/radio logic, and autofills forms to significantly reduce manual form filling.
- Trained an NLP label classifier in Python (scikit-learn: TF-IDF + Logistic Regression) and a resume-to-job description matcher (Sentence-BERT) to score fit and surface matched and missing skills.
- Built multiple web-facing features including REST API integrations, client-side workflows, and full-stack logic across Flask + JavaScript, similar to modern full-stack environments (React + Node/Python).
- Dockerized the Flask backend and deployed it to AWS Cloud Run, adding S3-backed resume storage and a simple docker-compose flow so contributors can run the API locally or in Docker with one command.
- Designed a lightweight ETL system to parse resumes, extract structured data, and store text/profile assets across AWS S3 and local storage for cross-environment support.

Online Railway Booking System | Java, SQL, JSP, HTML, CSS

[GitHub](#) | [Demo](#): <links>

- Co-developed a full-featured railway booking system with real-time schedule and reservation management using JSP, HTML, and CSS, enabling a dynamic and user-friendly web interface.
- Developed full-stack JSP/HTML/CSS pages with SQL-backed dynamic content, comparable to CMS and template-driven web environments used in agencies.
- Used JDBC and MySQL to design and optimize secure, efficient queries that reduced redundant data operations, accelerated page load times, and improved overall system responsiveness.
- Deployed using Eclipse and Tomcat Server, optimizing backend performance and data retrieval.

Pizza Ordering App | Java, Android SDK, JUnit

[GitHub](#) | [Demo](#): <links>

- Developed an Android app for pizza ordering using Java and Android SDK, applying OOP principles such as inheritance and polymorphism to reduce repetitive logic and improve long-term code flexibility.
- Implemented Singleton pattern for managing orders and added JUnit tests to catch edge-case bugs early.
- Adopted an MVC-style structure to separate UI and logic, improving code clarity and maintainability.
- Integrated RecyclerView, Toast, and AlertDialog to build an interactive ordering workflow, providing customers with real-time feedback and a polished UI; stabilized the app with extensive functional testing in Android Studio.

WORK EXPERIENCE

Target Corporation

Learning Ambassador

Perth Amboy, NJ

February 2021 – June 2024

- Delivered training programs for new hires, accelerating onboarding and improving team performance.
- Used work systems to schedule shipments, track trailer arrivals, and manage inventory operations.
- Maintained communication with leadership teams to support logistics and resolve operational issues.
- Supported daily warehouse operations to maintain accuracy, efficiency, and smooth task execution.

Amazon Sortation Center (PNE5)

Warehouse Associate

Robbinsville, NJ

August 2025 – Present

- Cross-trained in inbound & outbound; executed scan/sort/stage flows and supported on-time trailer departures.
